

Accurate
Safe
Smart

Radius Track Corporation's **Curved-Right**[®] CFS Formwork & Framing offers a geometrically accurate solution to wood framing and provides greater control over the shapes you pour. They can be used for domes, foundations, arched and curved openings. Our team of CFS framing experts will design curved framing elements to your project's specifications, oversee their fabrication and have them delivered with detailed layout and installation drawings to your job site.

We made construction of this 44'-6" Dome ACCURATE, SAFE, and SMART

ACCURATE

- Engineered solutions
- Our patented bending method produces consistent preformed geometry
- Components fabricated off-site and delivered ready for assembly with detailed drawings

SAFE

- Constructed on the ground
- Less work happening 50+ feet in the air
- CFS provides high strength to weight ratio and is lighter than wood or red iron steel
- Lightweight bracing is available
- Form assemblies can be erected on the ground and hoisted into place

SMART

- Coordinated design and fabrication
- Reduced scaffolding needs
- Compatible with many materials
- Less expensive than rented alternatives
- Curved-Right® CFS Formwork & Framing saves you money. Very smart.

Complete an online request for quotation, send us drawings, or give us a call; and one of our estimators will prepare a quote for you.
