

Ready-Track, Angle, and Hat Hold Their Shape for Safe, Easy Installation.

Framing Curved Walls & Soffits with Hand-Bendable Ready Products HCMC Specialty Center | Minneapolis, MN

The serpentine shaped façade of glass at the new HCMC Specialty Center in Minneapolis, MN sets the stage for curved walls, ceilings and soffits. “There were curves going every which direction and constantly changing and a gigantic swooping serpentine soffit feature. Our installers like how Ready Products by Radius Track Corporation hold the shape they bend them to. That feature makes framing fast and easy,” said Kevin Larson, Olympic Companies Senior Project Manager.

Larson finds framing complexity increasing and schedule requirements remaining the same as if the project called for straight framing only. Ready Products help them deliver curved framing on time. “Olympic schedules and plans their projects proactively which makes everyone’s work flow accordingly,” said Jane Metzger of Metzger Building Materials. “Ready Products are in-stock steel framing profiles that offer the quality and availability our customers expect!”

There was a Ready Product to fit each need.

- Ready-Angle framed wide serpentine soffits easily
- Ready-Track framed standard width walls & soffits
- Ready-Hat framed specialty features

Ready Products are great when the radius cannot be locked down in advance, or curved framing is needed on site in less than a week. Beyond hand-bendable solutions, Radius Track is the expert in designing, engineering and fabricating framing systems for complex geometry. We collaborate with architects, general contractors and installing contractors to develop cost-effective, constructable framing solutions that honor the design intent.

PROJECT TEAM:

Architect: [BWBR Architects](#)

Construction Manager: [Mortenson](#)

Specialty Contractor: [Olympic Companies, Inc.](#)

Distributor: [Metzger Building Materials](#)

Hand-Bendable Framing: [Radius Track Corporation](#)

Bridge the gap from complexity to constructability.

Radius Track is the subject matter expert in designing, engineering and fabricating framing solutions for curved and complex surfaces. Our Design Assist + Precision Fabrication process ensures the accurate translation of your ideas – from design through material delivery.

We are passionate about serving our customers well. Our vast experience with curved and complex surfaces assures that we anticipate potential fabrication and construction issues before they place a project at risk. And we support the project to the finish by delivering concise installation instructions and, most importantly, staying with you until the job is done.
